

Visitor Management System

make each visit worth

Visitor Management System is a software solution designed for quick and accurate identification of visitors in facilities with high frequency of guests or high safety requirements.

The program reads and records all data from personal documents and controls the access of each individual towards security settings of the facility.

It accelerates the entry procedure and increases security level. The program also provides various statistics which can be used to set working environment to the actual needs of your business.

Easy to use software solution can be used in small business buildings up to large organizations with many facilities.

Visitor Management System

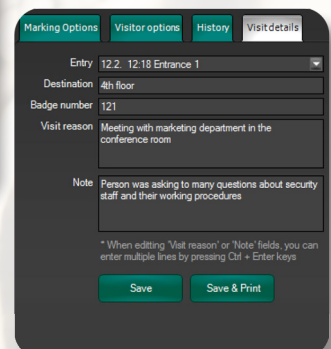

WHERE

- Lobby control (business or residential buildings)
- Access control (warehouse and various other facilities)
- Restricted areas (oil and gas platforms, airports)
- Entertainment (casinos, clubs and bars)
- Events (conferences, concerts)
- Sports facilities (stadiums, sports halls)

WHY

- To speed up entry procedure
- To increase security level
- To get full insight about visitors
- To have a list of witnesses in case of incident
- To digitalize entry log books
- To create statistics and reports
- To provide a working tool for the security department

Basic functionalities of Visitor Management System

- Easy to use
 - 1 click solution
 - User friendly graphic interface
- Scan and read more than 1300 personal documents worldwide in a few seconds
- Automatically store all personal details into the database
 - No more books on the reception
- Face and document images of all the visitors are stored in the database
- Visitors count per entrance or for entire facility
- Individual visitor history report
 - With entrances and times of arrival and departure
- Incident reports are automatically visible at security manager's computer
- Automatic notifications for banned persons, persons under warning, persons with expired documents
- VIP notifications for important guests
 - Security guards can provide them with a special treatment
- Several visitor lists:
 - Persons inside the facility
 - Persons who left the facility
 - Prevented persons who wanted to enter the facility
- **All the buildings (entrances) are connected to one central database**
 - Possibility to monitor each building separately or all buildings at once
- Powerful search engine
 - Allows to find any visitor who entered at any of the facility entrances
 - Allows to track all the visitors who entered in some period (for example all the people who entered (or even left) at the entrance No. 3 on the 25 August from 10 – 10.45 pm)
- Provides various reports for single visitor or all visitors
- Powerful statistics which provides exact number of visitor entries per building or per entrance etc.
- Charts module enables insight into the fluctuation of visitors in your facilities
- Print membership cards, accreditations, visitor badges
- And many more functionalities...
